PART I - UNITED STATES SUMMARY 7

PART II - STATE SUMMARIES 25

INTRODUCTION

WPA PROJECTS SELECTED FOR OPERATION THROUGH APRIL 15, 1936

More than 90,000 work projects with an estimated total cost of about $1,460,000,000 had been selected for operation under the Works Progress Administration through April 15, 1936. The charts and tables which follow indicate the types of work represented by these projects, their location, the amounts which both the WPA and sponsors contribute for their prosecution and the relative amounts to be expended for labor and for other costs of operation.

Projects were actually initiated in the localities where they now operate, under a procedure by which local or State officials prepared plans and submitted applications for projects, at the same time agreeing in most instances to contribute a part of the necessary funds. Of the projects thus submitted, about 178,000 estimated to cost about $5,450,000,000 were approved by the President. From this store of approved projects, WPA State Administrators have selected those best adapted to the prosecution of the WPA program. In making this choice it was necessary to take into consideration such factors as the residence and skills of the eligible workers from relief rolls, the funds available, the weather conditions, and the necessity of completing jobs once they were started.

Largely because of the limited funds available, State Administrators in many instances initiated work on only certain work units of approved projects, rather than on the entire project as submitted. The figures given in the tables of this report represent the cost of project units actually selected for operation as est mated at the time when the State Administrator made funds available for the operation of the work project.

Part I - United States Summary

An analysis of WPA projects for the country as a whole is presented in this group of tables. These indicate the number of projects, their estimated total cost, the average cost per project, and average man-year cost both from WPA and sponsors' funds, as well as expenditures for labor and other purposes, for each type of project being operated under the WPA program. The amount of construction and other types of work being undertaken is likewise shown. The relative importance of major types of projects and the amounts of WPA funds and sponsors' contributions made available for each type are illustrated in the chart on page 8.

Projects involving work on highways, roads, and streets are of outstanding importance under the WPA program, representing an expenditure of almost 529 million dollars or more than a third of the total cost of all projects selected for operation. Next in terms of value are projects for the improvement and expansion of public recreational facilities such as parks, playgrounds, swimming pools, and athletic fields. These account for nearly 13 percent of the total value of WPA projects. Almost as large a portion of the total cost is represented by projects involving work on public buildings such as schools, hospitals, and other institutions. Among other major types are sewer system and other public utility projects, covering almost 10 percent of the total cost, and white collar projects on which a slightly smaller proportion of the total project funds are being spent. Goods projects, producing necessities for distribution among the destitute unemployed, represent about 8 percent of the cost of all projects. Flood control, sanitation and health, airport and other transportation projects, and a group of miscellaneous projects make up the balance of the WPA program and together account

for about 13 percent of its total cost.

Sponsors' contributions pledged for projects selected for operation, as indicated in the charts and particularly in Tables 1, 2, and 5-B, amount to more than 265 million dollars, or over 18 percent of the total estimated cost of all WPA projects. The proportion of the total cost which is being borne by sponsors varies considerably among the various major types of projects. Goods projects, on which sponsors will provide funds amounting to 9 percent of the cost, and sanitation and health projects, on which they will contribute almost 26 percent, represent the extremes in this respect. For three other types of projects - highways, roads and streets, public buildings, and sewer systems and other public utilities - sponsors have pledged more than a fifth of the total cost.

Almost four-fifths of the total funds made available by the WPA are used for direct labor costs. On the other hand, the bulk of the sponsors' contributions (86 percent) goes for materials, equipment and other operating expenses. This relationship is true of most types of projects. Comparison between the proportions of WPA and sponsors' funds used for labor and other costs on the major types of projects is shown in considerable detail in Table 3. On all but three types of projects, between 75 and 80 percent of the WPA funds represent direct labor costs. The use of WPA funds for labor is even more marked on white collar, and on sanitation and health projects, on which about 94 and 90 percent, respectively, of the WPA funds are spent for this purpose. On the other hand, only 65 percent of these funds go to labor on airport and other transportation projects.

Another important aspect of the WPA program is the extent of construction work being undertaken. Table 5-A indicates that more than 78 per-

cent of the total value of WPA projects selected for operation represents construction work; 36 percent involves new construction while 42 percent is for repair and improvement work. Other types of projects not involving construction work - white collar, goods, forestation, sanitation and health, etc. - account for the remaining 22 percent of total funds. More than 20 percent of the total cost of construction projects will come from sponsors as compared with slightly more than 10 percent for non-construction projects. In other words, sponsors have pledged relatively twice as large an amount for construction projects as for non-construction work. It will also be observed that new construction work draws a larger proportion of total funds from sponsors than does construction work involving chiefly repairs and improvements.

Part II - State Summaries

The tables of this section present a detailed analysis of the WPA programs in each of the several States. A summary table, by States, shows the number of projects selected for operation and their estimated total cost including both WPA and sponsors' funds. A table for each State indicates, by type, the number and value of projects selected and expresses the State total for each type as a percentage of the corresponding total for the country as a whole. Other State tables show the number and value of projects selected for operation by counties grouped by WPA work districts. Shaded maps indicate the relative importance of certain major types of projects with respect to the total programs of the several States.

Table 6 on page 27 shows the magnitude of the various State WPA programs in terms of estimated total cost. In each of three States - New York, Pennsylvania and Ohio - projects valued in aggregate at more than 100 million dollars have been selected for operation. At the other extreme are

Nevada and Delaware in each of which the total value of projects selected for operation amounts to less than two million dollars.

The proportions of the total cost of projects contributed by the sponsors in the various States are shown in the tabulation mentioned in the preceding paragraph. These range from more than 40 percent in Wyoming and Georgia, to less than 10 percent in West Virginia and the District of Columbia. Five other States in addition to those mentioned above reported that more than 30 percent of the cost of projects selected for operation would be provided from sources other than WPA funds, while seven other States indicated that between 10 and 15 percent of the cost of projects would be contributed by sponsors.
